High Volume Side Tipper

PROTECTED BY INTERNATIONAL PATENTS & BASED ON OVER 40 YEARS' EXPERIENCE

The patented High Volume Side Tipper (HVST) is unique throughout the world. It consists of a hinged upper body that effectively doubles the volumetric capacity of the trailer with little increase in tare weight. The AZMEB HVST is SAFE because tipping is entirely controlled from the truck cab, as are opening and closing the side door and the optional tarp cover.

It is highly PRODUCTIVE thanks to its very fast tipping cycle, up to 10 times faster than a "walking floor" type unit. This means potentially more loads per day, fewer trucks on the road and fewer drivers required. What's more, its design allows the cartage of a wide variety of loads ranging from very low density to very high density.

ECO-FRIENDLINESS is aided by the leak-proof bowl shaped tub floor and full length rubber hinge, meaning you can carry high moisture content loads without the risk of spillage.

LOW MAINTENANCE is ensured by simple and fast hydraulics, with two rams doing the job of three at each end, fewer parts and fewer hoses. There are also very few grease points and they are all serviced by remote grease lines. The bowl is made from one piece of 450 grade wear plate and sits on full length rubber pads that absorb loading shocks. The full length rubber hinge is durable, requires no grease and resists product jamming.

APPLICATIONS

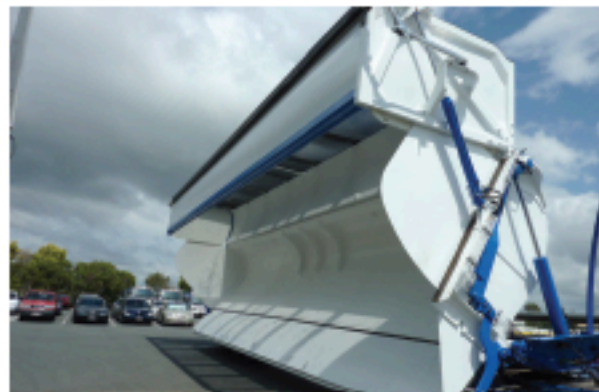

- Cartage of waste, recycled products, pulp, sawdust, woodchips, compost and other products with low density. Can also carry sand, gravel and rock if loaded to "half height".

CONFIGURATIONS

- Available in Rigid, Lead, Tag and Road Train configurations, with cubic capacities ranging up to 85 cu.m. per trailer and 120 cu.m. per B-Double. The tub is typically made of steel and the upper body of aluminium, but variations on this are available.

- The standard radio remote controller allows the driver to operate the tipper from either inside the cab or at a safe distance outside the cab

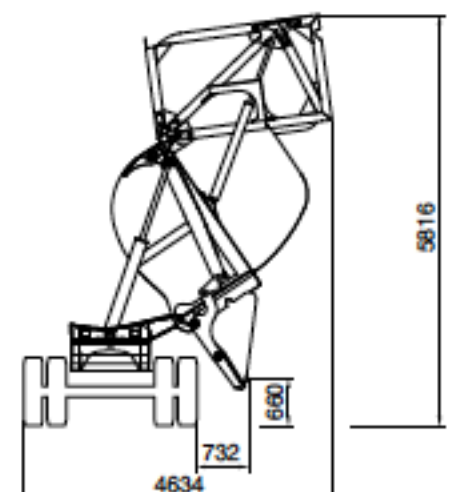

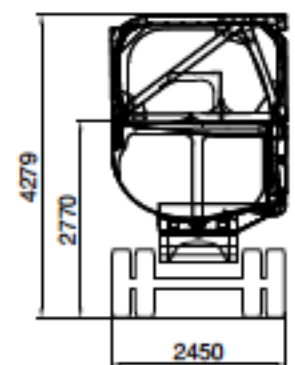

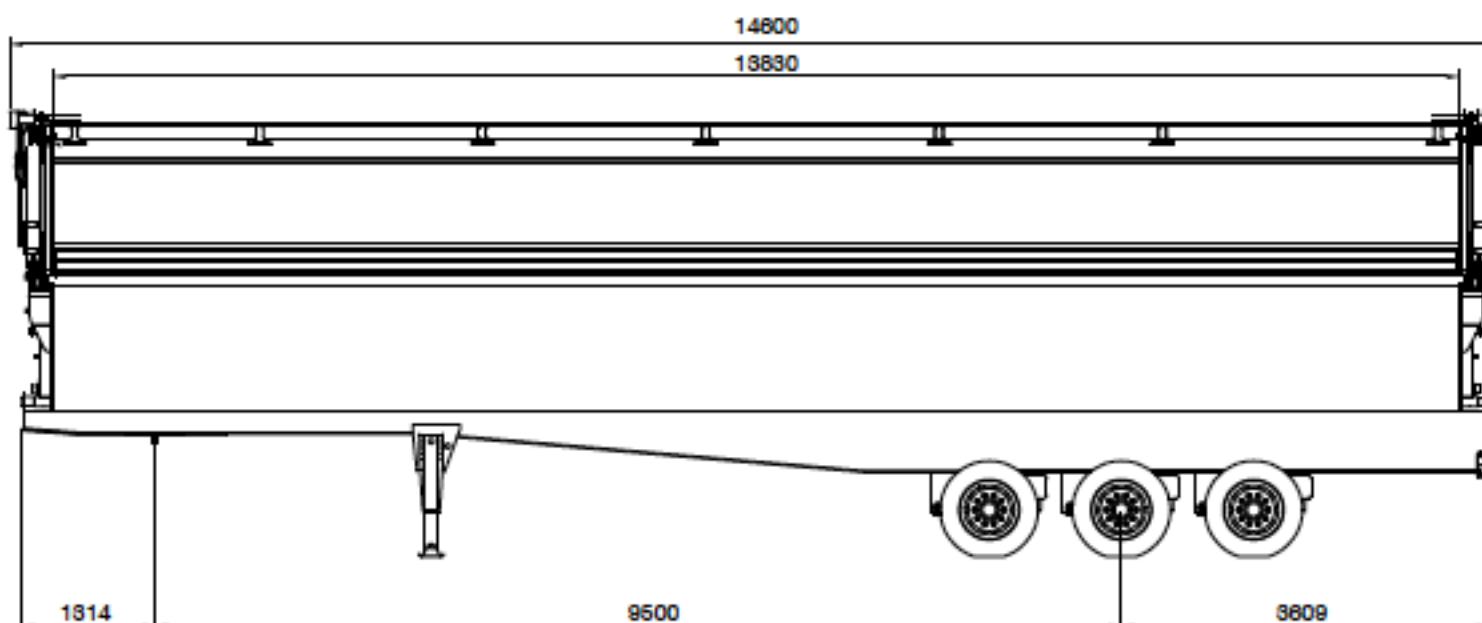

- The HVST tips wide open for fast unloading. All hydraulic plumbing and linkages are designed for simplicity

- Patented full length reinforced rubber hinge is durable, reliable and leak-proof, requires no greasing and is less prone to jamming with carted product
